

## Schiltrac - New era with 250 hp thanks to revolutionary software engineering

<https://www.schiltrac.ch/>

Schiltrac Fahrzeugbau presented a new innovation in the transporter market around a year ago. The new technology gives the implement carrier an impressive 250 hp boost and at the same time enables comfortable stepless driving with a total weight of 14 tonnes.

The innovation promises to increase efficiency in various application areas such as municipal/transport companies, fire brigade operations and agriculture. Schiltrac Fahrzeugbau has invested extensive research and development in this pioneering solution.

The 250 hp boost is achieved through the combination of a powerful 6-cylinder engine and advanced software. The advanced technology makes it possible to automatically call up additional power to effortlessly master steep inclines, improve acceleration or utilise an exceptional power reserve in emergencies.

Discover the Schiltrac Euro-/Swisstrans: Compact (2.15m cab width) and with four-wheel steering for best manoeuvrability. 7000kg axle load enables front attachments with crane mounted behind the cab. Simple one-hand joystick operation thanks to a software concept developed in-house. Modular interchangeable superstructure system opens up unlimited superstructure options. Low overall height (<2.50 m) and loading bridge (from 1.10 m) for practical work applications. A quality product manufactured in Switzerland - a reliable partner for a wide range of tasks!

'Our 250 hp boost and the stepless drive function set new standards in performance, efficiency and user-friendliness,' say Managing Directors Urs Baumgartner and Peter Barmettler. The new technology will be presented to interested parties in person over the coming months and promises to be a major step towards a more efficient and sustainable future for the vehicle sector."
